

## Our Mission

Our mission is to create a cleaner and more sustainable future. 174 Power Global partners with landowners, energy off-takers and investors across the U.S. to build solar, energy storage and green hydrogen facilities, generating and storing clean power.

## Vertically Integrated From Generation to End Market

### 100% Green Electricity

Our solar facilities deliver electricity to the grid for immediate use and the generation of 100% Green Hydrogen.

### Electrolyzer

An electrolyzer splits water into oxygen and hydrogen through a process known as electrolysis.

### Transportation

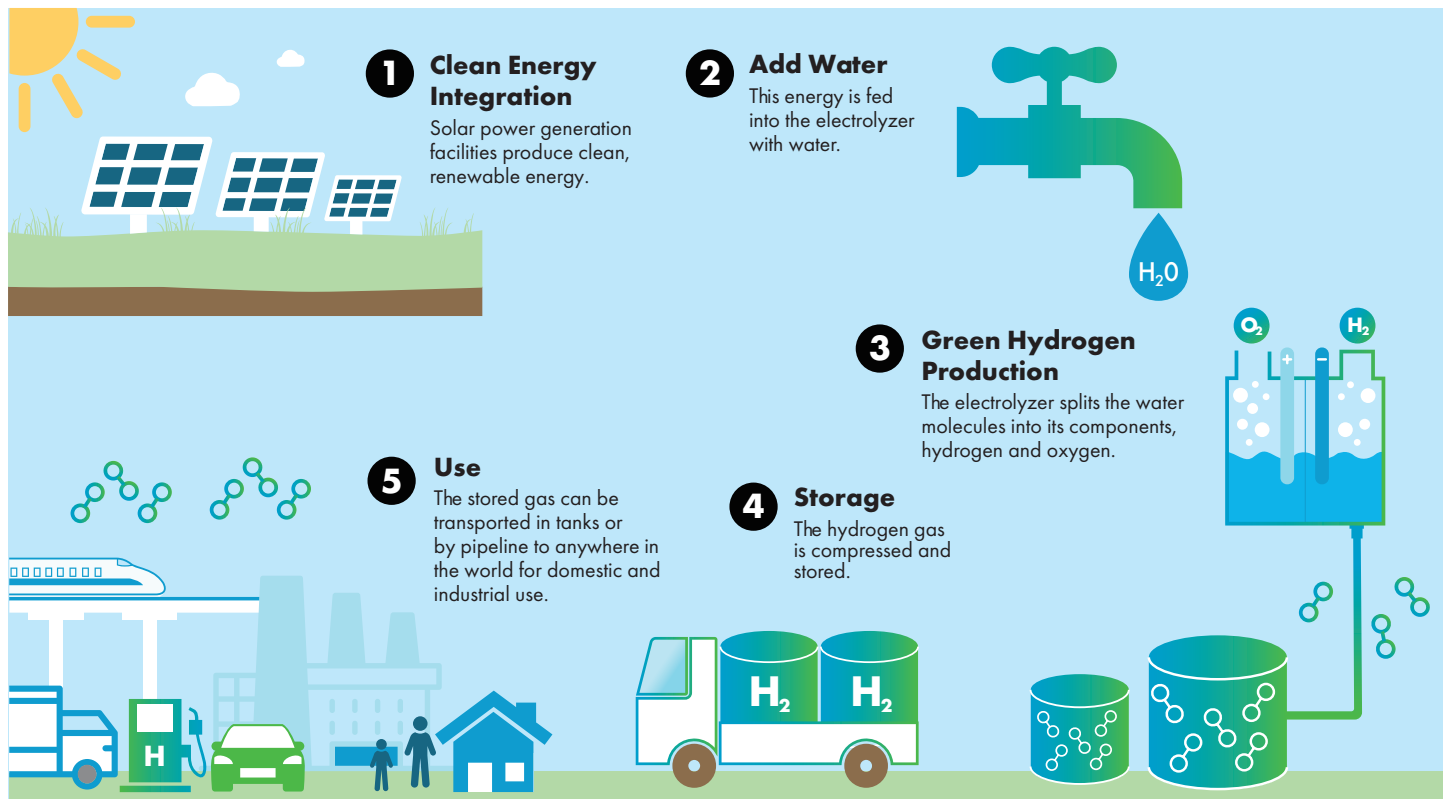

A delivery platform under development will transport via existing pipelines, road, or rail.

### Application

Green Hydrogen can be utilized at on-site fueling stations to power trucks or converted back to energy and sent back to the grid.

## How is Green Hydrogen Produced?
